Dear Colleagues,

Following the successful two editions of the Special Issue “Opioids and Their Receptors: Present and Emerging Concepts in Opioid Drug Discovery” in Molecules, the new joint Special Issue with International Journal of Molecular Sciences, Journal of Clinical Medicine, Molecules, Pharmaceuticals, Pharmaceutics and Chemistry aims to gather works on the latest chemical and pharmacological developments in the opioid research, with further understanding of opioids and opioid receptor-mediated actions and the search for alternative treatments for pain and other human disorders where the opioid system plays a central role. A special attention is drawn to advancing concepts in opioid drug discovery in the light of the current opioid crisis.

We give thanks for past contributions and welcome original articles, short communications and review articles on current and emerging concepts in opioid drug

discovery and in general opioid research, ranging from basic science to translational research.

For more information about the Special Issue, please see:

<https://www.mdpi.com/topics/opioids>

For information on manuscript preparation and related matters, please see the instructions for authors: <http://www.mdpi.com/journal/molecules/instructions>

We would appreciate letting us know on your interest in submitting a manuscript to this Special Issue, at which point we will be happy providing more detailed submission instructions. Discounts on APC can be provided. We look forward to hearing from you soon.
